

To make the quiz pass question by question, you can add some logic to the QuizComponent.vue. Here is some sample code to get you started:

php

 Copy code

```
<template>
  <div>
    <h2>Question {{ currentQuestionIndex + 1 }} of {{ totalQuestions }}</h2>
    <p>{{ currentQuestion.question }}</p>
    <div v-for="(choice, index) in currentQuestion.choices" :key="index">
      <input type="radio" :id="'choice' + (index + 1)" :value="choice" v-model="selectedAnswer" />
      <label :for="'choice' + (index + 1)">{{ choice }}</label>
    </div>
    <button @click="nextQuestion">Next</button>
    <div>Progress: {{ progress }}%</div>
  </div>
</template>

<script>
export default {
  props: {
    questions: {
      type: Array,
      required: true,
    },
  },
  data() {
    return {
      currentQuestionIndex: 0,
      selectedAnswer: '',
    };
  },
  computed: {
    currentQuestion() {
      return this.questions[this.currentQuestionIndex];
    },
    totalQuestions() {
      return this.questions.length;
    },
    progress() {
      return ((this.currentQuestionIndex + 1) / this.totalQuestions) * 100;
    },
  },
  methods: {
    nextQuestion() {
      if (this.currentQuestionIndex < this.totalQuestions - 1) {
        this.currentQuestionIndex++;
      } else {
        // quiz is finished, handle results
      }
    }
  }
}
```
