```
<div>
  <h2>Results</h2>
  <p>You answered {{ correctAnswers }} out of
```

i mean randomly

To display the questions randomly, you can use the Fisher-Yates shuffle algorithm to shuffle the questions array before displaying them. Here is some sample code to get you started:

php   Copy code

```php
<template>
  <div>
    <h2>Quiz</h2>
    <div v-if="!isFinished">
      <h3>Question {{ currentQuestionIndex + 1 }} of {{ totalQuestions }}</
      <p>{{ currentQuestion.question }}</p>
      <div v-for="(choice, index) in currentQuestion.choices" :key="index">
        <input type="radio" :id="'choice' + (index + 1)" :value="choice" v-
        <label :for="'choice' + (index + 1)">{{ choice }}</label>
      </div>
      <button @click="nextQuestion">Next</button>
      <div>Progress: {{ progress }}%</div>
    </div>
    <div v-else>
      <h3>Results</h3>
      <p>You answered {{ correctAnswers }} out of {{ totalQuestions }} ques
      <ul>
        <li v-for="(question, index) in questions" :key="index">
          <p>{{ question.question }}</p>
          <p>Your answer: {{ userAnswers[index] }}</p>
          <p>Correct answer: {{ question.correctChoice }}</p>
        </li>
      </ul>
    </div>
  </div>
</template>

<script>
export default {
  props: {
    questions: {
      type: Array,
      required: true,
    },
  },
  data() {
```
